Introduction/Context

The undergraduate nursing program has the overarching goal to prepare nurses for professional practice. The program is fully accredited by the Commission on Collegiate Nursing Education (CCNE) and approved by the Ohio Board of Nursing (required for graduates to progress to licensure.) Previously the undergraduate nursing program was accredited by the National League for Nursing Accrediting Commission (NLNAC) which does not accredit graduate programs.

Faculty in each clinical specialty area review objectives and outcomes for their area on an ongoing basis. At the end of each academic year, all Faculty collectively review reports of outcomes. Trends are identified for areas and across the program with a plan of action developed for the upcoming academic year.

The undergraduate nursing program has a comprehensive evaluation plan that includes documentation of compliance with state laws, adequate resources to operate the program, an organizational structure that supports achieving the School’s mission, accurate information on the program available to the public, documentation of faculty productivity, and other measures. The student learning outcome data reported here is taken from that data.

The School’s Program Evaluation Committee reviews the current evaluation methodologies and evaluation plan and facilitates data collection and analysis.

All students enter the BSN major through a competitive admissions process and progress through three levels of classes (sophomore, junior, and senior). The accelerated students follow the same progression format as the basic students, albeit at a faster pace since they already have earned an undergraduate degree in another discipline. Student learning outcome data on nursing skills, nursing standards of practice, nursing care planning and therapeutic communication are assessed in relation to at increasingly more complex objectives throughout the progression of courses. These assessments at the level of the senior courses culminate in the evaluation of students’ ability to meet program terminal objectives and obtain their RN license to practice nursing.
In December 2004, benchmarks for each of the current direct measures were established by the full faculty based on:

1. Expectations related to progression in achievement of terminal objectives.
2. Results achieved in the preceding two academic years.
3. Experiences of comparable programs.

They are reviewed annually and revised or revalidates for the upcoming academic year.

**Goal**

The primary goal of the BSN program has not changed. It remains as follows: Graduates will be ready to practice professional nursing in all of the discipline’ specialty areas.

**Outcomes & Research**

Since submission of the last status report, Faculty in the School of Nursing continues to review and revise program outcome benchmarks to specifically reflect student learning. As they are now defined, **clinical skill outcomes which are assessed by direct measures are outlined below**.

A) Students will demonstrate competency in progressively difficult nursing skills in the campus Nursing Resource Laboratory (NRL), measured by ‘skills checks’ in the NRL

B) Students will apply the professional standards of nursing in the clinical area as documented by scores on the course-specific clinical evaluation tools.

   1) Students will demonstrate ability to plan, deliver, and evaluate outcomes of professional nursing care as measured through scores on written nursing care plans and clinical course evaluation.

   2) Students will demonstrate the progressively more comprehensive use of therapeutic communication skills in practice settings as measured through scores on written process recordings.

C) Students will demonstrate mastery of nursing knowledge required for safe practice as measured through standardized tests in all subject areas of the discipline. Direct measures of theory course outcomes are being considered to supplement the current standardized test results for a more complete evaluation of that aspect of student learning.

D) Graduates of the program will successfully pass the NCLEX-RN licensing exam on first taking, as measured through test scores.

**Indirect measures are used to assess the two outcomes that follow.**

E) Graduating students express readiness for professional work as assessed through exit interviews/focus groups.

F) Alumni report preparedness for professional work as assessed through questions on an alumni survey.

NCA Progress Report #10
B.S. in Nursing
Findings

In order to become a licensed Registered Nurse, program graduates must ultimately take and pass the NCLEX – RN. Optimally, we would like our graduates’ passage rate to be at or above 95% of the national mean for each testing. Since 2003, we have met or exceeded this objective.

Appropriate benchmarks have been set for all other direct measures employed to assess student progress. As tabled findings contained in the accompanying Status Report #10 reveal, based on the available data, all established benchmarks have been met. Nevertheless, as noted below some specific actions to further strengthen the program have been identified for implementation in the upcoming academic year.

Review

Assessment results are periodically reviewed with a comprehensive review of all data by the entire faculty on an annual. The last such evaluation meeting was held on May 14, 2007. Focus groups comprised of graduating seniors are also held to solicit student opinion on proposed curricular and instructional changes and the quality of the program overall.

Actions

Outcome C. To better ensure students’ readiness to take and pass the NCLEX – RN, the scoring benchmark on preparatory ATI exams was raised from passage at the 50th percentile in comparison to peers to passage at the 60th percentile. Implementation of this new benchmark continues to be monitored. Students did achieve targeted scores on AIT exams used to assess mastery of nursing knowledge in all major subjects; however the repeated practice needed in some instances has suggested the need for further scrutiny of ATI testing data. Faculty continues to look for trends in testing for individual students who may be having difficulty in test performance during the upcoming year. In Spring 2007, 19 of the senior students had difficulty in meeting the ATI exit testing requirement. They were advised by the School Director, half sent to the counseling center for additional assistance with test anxiety, and all referred to a graduate student project in test preparation. Outcome results will be known in 2007-08 when these students complete their licensing exams.

Outcome F. The next Alumni survey is scheduled for academic year 2007 – 2008.
Program: B.S. in Nursing

Program Goal: Graduates will be ready to practice professional nursing in all of the disciplines specialties.

NUR 414: Comm. – 94 % A, 6 % B,  
NUR 441: Comm. – 86 % A, 14 % B | Benchmark was set Dec 2004 -- that 90% of students should successfully achieve the objectives. | Faculty reviewed data on May 14. Students are meeting benchmarks. |
### OUTCOMES

#### ASSESSMENT MEASURES (Direct)

C. Students will demonstrate mastery of nursing knowledge based on standardized tests in all subjects in the major.

Students take the following standardized test as assessment of course material using ATI subject matter tests in:

- Fundamentals of Nursing
- Acute care
- Pharmacology
- Mental Health
- Maternity Care
- Pediatric Care
- Community Health
- Readiness for licensure

( ATI = Assessment Technologies Inc, nationally-normed tests for nursing majors in identified subject areas. Tests evaluate for knowledge needed for safe practice in the discipline.)

**FINDINGS/RESULTS**

Across all courses, half of students have tested at or above the 60th percentile compared to peers on first testing.

For those who do not achieve the 60th percentile, the number successfully passing the non-proctored testing requirement is 100%. (This is a requirement for progression in the program.)

44.6% of the basic senior students (Fall 06) pass the NCLEX Predictor ATI, a more comprehensive standardized test on their first try. 56% of the accel. Students (summer 06) passed on first try.

**REVIEW OF RESULTS** (comparisons with target objectives)

Students meet the current benchmarks.

**ACTIONS**

Faculty discussion re ATI testing. Many students do not pass first try, but all do complete the required non-proctored tests.

Action: for further discussion, perhaps the score on ATI should be factored into the score on the final grade. Many students do not take the test seriously and do not get as much out of the ATI system as is possible.

This item to be discussed Fall 07/

**D.** Graduates will successfully pass the NCLEX exam — the national Registered Nurse licensing exam required for practice.

NCLEX - RN is the national licensing examination for Registered Nurses.

In 2001, 71% of graduates passed the NCLEX on first taking.

In 2002, 77% passed.

In 2003, 88% passed.

In 2004, 89% passed.

In 2005, 90.48% passed first try.

In 2006, 94.85% passed first try.

The target score for success is to have CSU graduates pass rate to be at or above 95% of the national mean for each testing.

In 2002, the 95% of the national mean was 78%; in 2003 it was 85%, in 2004 it was 85%, in 2005 it was 87.33.

In 2006, the national mean was 81.47%.

Since 2003, CSU graduates have met the target score.

**ACTIONS**

Since benchmark was met, no further action needed.
