

M.S. in Nursing

2007 NCA Progress Report # 10

Introduction/Context

The MSN nursing program has the overarching goal of preparing nurses for an advanced role in professional practice. Four tracks are available.

Population Health

This track prepares RN's for advanced specialized practice in population-based care and is designed for full- or part-time students. Population-based care includes the ability to assess health needs of a population; plan, advocate and participate in policy development; think analytically and strategically; and act effectively with other organizations and systems. Students gain skill in collaborating with health care professionals and the community to provide for the health needs of specific populations in a complex society.

Forensic Nursing

In addition to completion of the MSN program's core content, students who elect the forensic nursing track concentrate their student on the science and the art of applying nursing to both criminal and civil investigations and legal matters. More particularly, emphasis is given the scientific investigation and treatment of victims/perpetrators of criminal activity or traumatic accidents within the clinical or community institution. Students acquire the in-depth knowledge and skill that interfaces the law, forensic science, law enforcement, mental health, health care and nursing.

Clinical Nurse Leader

This track retains the population health focus but concentrates the application of principles to a particular subset of clients within a system. Students gain skill in collaborating with health care professionals to provide for the health needs of a specific population in a complex health care system. Students in the Clinical Nurse Leader track are required to take coursework in information technology and pharmacology in addition to all core MSN Courses.

Nursing Education

The nursing education track provides nurses in the MSN program with the opportunity to acquire the skills needed for the teaching and clinical supervision of nursing students. Graduates of this program are prepared to teach and clinically supervise nursing students in the care of specifically identified populations or cognate area. Graduate students will take the core courses in the master's program as well as specialized courses focusing on nursing education: curriculum design and development, instructional design, faculty and student roles, and the evaluation and supervision of nursing student nurses.

MSN/MBA

The MSN/MBA track is intended to prepare nurses for careers in management and leadership. This unique program offers students advanced knowledge, competencies, and skills in nursing of populations (see above) and a foundation for their growth into competent business managers. The graduates will have in-depth skills in demography, epidemiology, data analysis, evaluation research, survey research, data projections, cost-benefit analysis and the ability to apply nursing theory, business theory, ethics, cultural awareness and political strategies to design, implement, manage, and evaluate health programs, departments, and facilities.

Accreditation

The MSN program is currently accredited by the Commission on Collegiate Nursing Education (CCNE) and was approved for re-accreditation upon review in April 2005. This review was conducted early in the accreditation cycle by request of the nursing faculty so that future reviews of the graduate and undergraduate nursing programs would be conducted on the same timetable.

For national accreditation, the program is required to have a comprehensive evaluation plan that includes documentation of compliance with state laws, adequate resources to operate the program, an organizational structure that supports achieving the School's mission, accurate information on the program available to the public, documentation of faculty productivity, and other measures. The student learning outcome data reported here is taken from that evaluation plan.

Requirements

Students enter the MSN program having completed a BSN degree. They progress through two distinct phases of that program and complete a self-evaluation of their progress in realizing terminal objectives/outcomes upon completion of Phase 1 and Phase 2 courses. One of the primary evaluative tools used in the MSN program is a student portfolio in which students present artifacts documenting achievement of the program's terminal objectives or outcomes. Students begin collecting work for inclusion in their portfolios early in the program and continue adding items until completion of the degree. In the past year, there have been three graduates of the program and their portfolios have been evaluated according to a scoring rubric developed by the faculty. For the next group of students progressing through the program, the faculty have identified specific courses to become formal checkpoints for portfolio evaluation and have implemented the ePortfolio system.

The second direct measure used to assess student outcomes is an action research project completed during enrollment in NUR 606. This project functions as the exit requirement for the program and includes development of a research proposal with IRB approval, submission of a written report detailing project findings, and preparation and presentation of an oral report.

Goal

The primary goal of the MSN program has not changed. It remains as follows: Graduates will demonstrate readiness to practice nursing in the advanced role of their chosen track: Population Health, Forensic Nursing, Nursing Education or Nursing Administrator.

Outcomes & Related Research Measures

Direct Measures

Professional Portfolio Requirements. Since submission of the last status report, Faculty in the School of Nursing have revised program outcomes to specifically reflect student learning. As now defined, outcomes assessed by direct assessment through submission of an acceptable professional portfolio are as follows:

Phase 1 Outcomes

Knowledge. Demonstrates a knowledge base in nursing practice, theory, stress, disease of adaptation, population theory, and in the ability to seek out evidence applicable to population focused care.

Nursing Process. Uses population models and the nursing process to enhance the assessment and planning phase of the nursing process.

Research. Synthesizes published research literature on a population health topic. Able to write a research proposal to investigate a question related to a specific population group.

Interdisciplinary Relationships. Identifies the roles a population health nurse expert may take in relation to those from other disciplines in the practice of population health nursing.

Leadership. Identifies leadership techniques and managerial skills that could be used to effect changes in the delivery of health care to populations.

Accountability. Demonstrates responsible, accountable, and ethical behavior.

Life-Long Learning. Recognizes the need for life long learning and continued professional growth.

Phase 2 Outcomes

Knowledge. Uses knowledge and skill from the natural, physical, behavioral, and nursing sciences, the humanities, stress and disease of adaptation, multiple theories and population-focused research to practice nursing across multiple care environments.

Nursing Process. Uses the nursing process and population models to provide therapeutic interventions at each level of preventive care to assist populations to achieve, maintain, or regain health.

Research. Generates and uses nursing research findings in the delivery of the care of aggregates.

Leadership. Uses leadership and managerial skills to effect changes in the delivery of health care to a population.

Interdisciplinary Relationships. Participates as an equal member of a multidisciplinary health team to coordinate, manage, plan or evaluate the care of a population group.

Accountability. Demonstrates responsible, accountable, and ethical behavior.

Life-Long Learning. Recognizes the need for life long learning and continued professional growth.

The scoring form and attendant rubric used to evaluate students' portfolios can be found in the appendix that accompanies this report.

NUR 606 Action Research Project. In addition to submission of a portfolio, all students are required to design and complete a qualitative or quantitative action research project during their enrollment in NUR 606 (*Practicum in Population Health Care*). This project serves as the exit requirement for the program unless the student otherwise elects to complete a thesis.

The purpose of the action research project is to demonstrate ability in the utilization of new knowledge to provide high quality health care, initiate change, and improve nursing practice. The project allows the student to fulfill this goal by demonstrating their skill in:

1. accessing current and relevant data needed to answer questions identified in nursing practice;
2. utilizing new knowledge to analyze the outcomes of nursing interventions, to initiate change, and to improve practice;
3. understanding and applying quantitative and/or qualitative research methods;
4. employing information systems for the storage and retrieval of data, consistent with the particular population focus;
5. initiating a line of inquiry into comprehensive databases in order to apply available research in the practice of nursing; and
6. writing and communicating effectively to identify a clinical problem, summarize research related to this problem, critically analyze the problem and current knowledge, and develop a strategy for the incorporation of the research into the treatment regimen.

The quantitative and qualitative scoring rubrics for the action research project are included in the appendix to this report.

Indirect Measures

Indirect measures are also used to assess program goals and outcomes. They include a 17-item survey administered at the conclusion of Phase 1 and Phase 2 courses. More particularly, this instrument asks students to indicate their perceived level of confidence in carrying out specific behaviors on a scale of 1-5. In addition, alumni and employer surveys are also employed to obtain further feedback on the quality and value of the program.

Findings

For convenience, findings are tabled in the accompanying Status Report #10. With the exception of the employment survey which will not be administered until the graduates are in an advanced nursing role for at least three months, all established benchmarks have been met.

Review

Assessment results are periodically reviewed on an annual basis by the entire faculty, the MSN Program Coordinator, and the director of the School of Nursing.

Actions

In September 2006, faculty further refined the portfolio review process to include formal (rather than informal) checkpoints of progress and implemented the ePortfolio system to assist with this process. These checkpoints will allow for formal tracking of each student's progress and will be needed as the numbers of students in the program increase.

In September 2006 the School of Nursing admitted students into the nursing education track which is the newest track in the MSN program. This track was designed to assist the community in reducing the overall nursing and nursing faculty shortages by encouraging nurses to become clinical instructors. The didactic portion of this track as well as all tracks in the nursing program have been converted to an internet access format to comply with the nurse's and employer's need for easy access and flexibility in educational programs.

Employer and alumni surveys will continue to be administered over time.

NORTH CENTRAL ASSOCIATION STUDENT ASSESSMENT PLAN
 2007 College of Education and Human Services Progress Report #10

Program: M.S. in Nursing

Program Goal: Graduates will demonstrate readiness to practice nursing in the advanced role of their chosen track: Population Health, Forensic Nursing, or Nursing Administrator.

OUTCOMES	ASSESSMENT MEASURES (Direct)	FINDINGS/RESULTS	REVIEW OF RESULTS (comparisons with target objectives)	ACTIONS
<p>A. Portfolio Review: Every graduate of the program must submit a portfolio documenting achievement of all program requirements (terminal objectives/outcomes).</p>	<p>Portfolios are scored according to a rubric developed by the faculty (see appendix).</p>	<p>To date, all program graduates (N=15) have satisfactorily completed the portfolio requirement.</p> <p>There have been 3 graduates of the program over the past year: All students completed the program and submitted an acceptable portfolio.</p>	<p>Faculty review portfolios and scores annually; graduating students have completed the requirement at a satisfactory level.</p>	<p>In September 2006, faculty further refined the portfolio review process to include formal (rather than informal) checkpoints of progress and utilize the ePortfolio system. These checkpoints will allow for formal tracking of each student's progress and will be needed as the numbers of students in the program increase.</p>

OUTCOMES	ASSESSMENT MEASURES (Direct)	FINDINGS/RESULTS	REVIEW OF RESULTS (comparisons with target objectives)	ACTIONS
<p>B. Action Research Requirement</p> <p>All students are required to design and complete a qualitative or quantitative action research project during their enrollment in NUR 606 (<i>Practicum in Population Health Care</i>). This project serves as the exit requirement for the program unless the student otherwise elects to complete a thesis.</p>	<p>Action research projects are scored according to a rubrics developed by the faculty (see appendix).</p>	<p>To date, all program graduates have satisfactorily completed the action research project requirement</p>	<p>Faculty review projects and scores annually; graduating students have completed the requirement at a satisfactory level.</p>	<p>No further action required.</p>
<p>C. Students completing Phase 2 courses document their perceived attainment of terminal objectives.</p>	<p>Phase 1 assessment tool is a 17-item survey where students indicate their perceived confidence in carrying out specific behaviors on a scale of 1 (low) to 5 (high).</p>	<p>Mean rating across all surveys (N=3) has been 4.213.</p> <p>Range for each item has been between 3–5.</p>	<p>Expected outcome has been rating of 3 or better. To date, all students completing Phase 1 classes have met the targeted expected outcome.</p>	<p>No further action required.</p>
<p>D. Students completing Phase 2 courses document their perceived attainment of terminal objectives.</p>	<p>Phase 2 assessment tool is a 17-item survey where students indicate their perceived confidence in carrying out specific behaviors on a scale of 1 (low) to 5 (high).</p>	<p>Mean rating across all surveys (N=3) has been 4.51.</p> <p>Range for each item has been between 4–5.</p>	<p>Expected outcome has been rating of 3 or better.</p> <p>Students have met the expected outcome</p>	<p>No further action required.</p>

OUTCOMES	ASSESSMENT MEASURES (Direct)	FINDINGS/RESULTS	REVIEW OF RESULTS (comparisons with target objectives)	ACTIONS
E. Program alumni complete an alumni survey assessing their reflections on their preparedness to function in an advanced nursing role.	The Alumni Survey is an 10-item tool asking program graduates to reflect on their education and their readiness to function in advanced nursing roles.	Survey to be sent to all program graduates (N=3) in Fall 2007 after being in advanced nursing role positions greater than 3 months.	Results to be tabulated with return of survey's	Evaluate survey results
F. Employers of alumni report program graduates are prepared for advanced nursing roles.	A 10-item questionnaire will be used to obtain feedback from those who employ program graduates.	Survey to be sent to all program graduates (N=3) in Fall 2007 after being in positions greater than 3 months. Meeting arranged for June 2007 with student preceptors to evaluate student performance in the advanced nursing role practicum	Results to be tabulated with return of survey's. Preceptor comments to be evaluated	Employer feedback will continue to be solicited and data will be reviewed over time.
