

SOCIETY OF PHYSICS STUDENTS (SPS) EVENT

The Role of an Undergraduate Research Experience in Engaged Learning

Dr. George Walker, Vice President for Research and Graduate Studies, Cleveland State University

It is known that an undergraduate research experience plays a crucial role in the clarification of graduate school intentions and refinement of career plans for physics majors/minors, yet the importance of this experience is not emphasized enough. Please join SPS and Dr. George Walker for an informal discussion on the importance of an undergraduate research experience and related topics. Dr. Walker would also be happy to answer questions regarding preparation for a successful and exciting career in physics.
