**Responsibilities:**

The Research Analyst will join a team working on a project funded by the Administration for Community Living to develop and test an intervention to identify and prevent self-neglect in adult healthcare patients. The project examines whether an enhanced in-home assessment is effective for identifying victims of self-neglect, referring to Adult Protective Services, and preventing future self-neglect.

The Research Analyst will serve as the project coordinator and will collaborate with the Cleveland-based Principal Investigator and Senior Research Analyst. The Research Analyst responsibilities include: coordinating work with collaborators in Texas; developing a database to track services provided to intervention and control group patients; assisting with questionnaire design; conducting data analysis; and assisting with report writing. The position offers opportunities to work in a professional, collaborative and creative research environment.

This is a two-year, grant-funded position beginning as soon as the best candidate is identified.

**Qualifications:**

The candidate must have a master’s degree in psychology, sociology, social work, gerontology or related fields, plus experience in database creation, data analysis and report writing. Preferred skills include experience using SPSS, and Microsoft Access, Excel, Word, PowerPoint, and Outlook.
